COAXIAL

dual-action fluted drain

The Redax Coaxial Thoracic Drain is a combination device enabling effective and simultaneous removal of both fluid and air. The design features an outer fluted body allowing fluid drainage by capillarity while its internal structure provides a separate lumen for air evacuation through distal perforations. A direct transition enables high-flow and increased patency rates. Patient pain and discomfort are reduced due to the Coaxial's unique design to mitigate tissue invagination, its silicone construction and the need for only a single insertion site.

- **DUAL-ACTION FLUTED CATHETER**
- **HIGH-FLOW DIRECT TRANSITION**
- **SILICONE CONSTRUCTION**

SPIRAL DRAIN™

helical fluted drain

The Redax Spiral Drain family facilitates performance via its innovative helical “V” channels allowing complex positioning and an increase in drainage surface area upwards of 30% compared to traditional fluted drains. The spiral design is complemented by a direct transition to increase flow and therefore improve patency.

- **SPIRAL FLUTED DESIGN**
- **DIRECT HIGH-FLOW TRANSITION**
- **RADIOPAQUE SILICONE COMPOSITION**

SMART DRAIN

fluted drain

The Redax Smart Drain family of products enhances the patency of wound drainage with a more direct transition zone, improving flow and overall evacuation. Drainage by capillarity is achieved by means of four distinct "V" channels. A silicone composition improves patient comfort while enhancing the standard of hemo-compatibility.

- **FOUR PRECISION "V" CHANNELS**
- **HIGH-FLOW TRANSITION**
- **SILICONE CONSTRUCTION**

THORACIC CATHETER

silicone perforated drains

Redax Thoracic Catheters are composed of 100% silicone, providing a soft, kink-resistant drain to improve patient comfort while meeting the surgeon's need of effective performance. Unique, beveled side eyes and open tip provide an atraumatic removal.

- 
- The image shows two thoracic catheters. One is positioned diagonally across the frame, showing its side with several circular perforations. The other is positioned below it, showing the open tip. Both are made of clear silicone with a blue internal tube.

JACKSON-PRATT™

silicone catheters

Redax Jackson-Pratt™ type drains provide safe and effective drainage of surgical wounds. Made of transparent silicone for softness and flexibility, its smooth surface provides ease of insertion and an atraumatic profile. The flat style offers a unique hubless design.

RESERVOIRS

bulb evacuators, closed system & kits

The Redax Drentech proprietary Closed System option increases drainage capacity and ensures patient and clinician safety. The transparent, flexible silicone reservoir bulbs enhance patient satisfaction and allow for visible, continuous drainage. Anti-reflux valves prevent backflow, leakage and contamination ensuring patient and clinician safety.
